

Lab1 Mastering CSS animations

- This is an individual lab, work alone
- Create the CSS animations defined as assignments in the CSS animations workshop (see toledo for details)
- Make sure you create your own repository on GitHub for this course (webtech2) and upload your solutions to a folder called “css-animations”
- The animations have to work in the latest version of the Chrome browser
- Keep in mind that you need different vendor prefixes if you want to support other browsers (not required for this lab, but definitely recommended!)

You have one week to finish this lab. Good luck!
